**Claim:**

A method of confirming a radiation zone of an object surface of an invisible ray radiated from the object surface, or a radiation zone of an object surface of said invisible ray radiated to the object surface comprising:

irradiating a ~~variety~~ of visible rays, leaving a appropriate space therebetween ~~around~~ said invisible ray, which go straight on said object surface substantially ~~parallel~~ to external edge of said invisible ray in an ~~internal~~ or ~~external~~ side close to said edge; and

confirming said radiation zone or radiated zone of said object surface of said invisible ray through reflected rays of said visible rays from said object surface.

## Claim:

A method of confirming a radiation zone of an object surface of an invisible ray radiated from the object surface, or a radiation zone of an object surface of said invisible ray radiated to the object surface comprising:

irradiating a ~~quantity~~ of visible rays, leaving a appropriate space therebetween ~~around~~ said invisible ray, which go straight on said object surface substantially ~~parallel~~ to external edge of said invisible ray in an ~~external or internal~~ side close to said edge; and  
confirming said radiation zone or radiated zone of said object surface of said invisible ray through reflected rays of said visible rays from said object surface.
